

# ~ MAKE YOUR OWN MINIMAL SHOES ~

## INSTRUCTIONS

### #1 TRACE YOUR FOOT

- ~ Place your foot as flat as possible
- ~ No need to be exact, slightly bigger is better.
- ~ Smooth out the curves (no bumps for each toe)

### #2 CUT THE TEMPLATE

- ~ Cut around the tracing rather than "on" the line. You can always refine it later on.

### #3 TRANSFER IT TO THE SOLE MATERIAL

### #4 CUT OUT THE SOLE

- ~ Depending on the thickness of the material, a cutter might be better than a scissor.

### #5 MARK THE THREE HOLES

- ~ Make sure your foot is flat on the sole.
- ~ Make sure the first dot is slightly inner than the center of those two first toes.

### #6 PUNCH THE HOLES

- ~ The size of the hole will vary depending on the thickness of the lace's material

### #7 CUT THE LACE & MAKE THE END POINTY

- ~ Cut the lace at your desired length.
- ~ Some materials may require to burn the endings and make it pointy in order to fit inside a hole (ie. polypropylene or nylon).
- ~ With a leather lace, simply cut the endings into a point.
- ~ Having water around (or a lot of saliva) can help on the process of making the ending sharp, if you plan to use your hand.

### #8 THREAD THE LACE THROUGH THE TOE HOLE & SECURE IT

- ~ You can secure the ending with the traditional "Figure 8 knot" or with another technique called "Lace Bead" (by burning the end flat)

### #9 THREAD THE OTHER 2 HOLES

- ~ First the outer hole, then the inner one.

### #10 PUT YOUR FOOT IN & TIE YOUR SANDALS

- ~ There are many methods to tie the sandals. Common ones are "Toga-style", "Kick Sock" or "Slip-on".

And you are ready! Enjoy!
